

MARKETING SWEET · INTERNAL NOTE · MAY 2026

How We're Using AI for Training.

Current workflow, the value still on the table, and the Marketing Sweet University vision that comes next.

WHAT'S INSIDE

- 01** **Current workflow**
Session → Claude → three assets → ChatGPT → Synthesia.
- 02** **The asset mix**
What each output is for and who consumes it.
- 03** **The gap**
14+ hours of content. Only ~70 minutes surfaced.
- 04** **Marketing Sweet University**
Future state: lessons indexed by topic, not session.
- 05** **Virtual Corie**
Teaching once. Delivering many times. Coaching only.
- 06** **The paid course thesis**
Pre-condition the talent pool. Charge for the privilege.
- 07** **Next steps**
What to build first. What to watch.

The current workflow.

End-to-end pipeline running today. From live session to published assets in the same day.

STAGE 1 · CLAUDE

STAGE 2 · CHATGPT → VIDEO

WHAT THIS UNLOCKS

Sessions used to evaporate. The pipeline retains every minute of content and reformats it into three different shapes — writing, visuals, video — so reps absorb in whichever format works for them.

The three-asset pack.

Each output serves a different consumption mode. Reps absorb differently — produce all three.

WORD DOC

The debrief

*Long-form structured write-up.
~10 sections per session.*

- Reference document for managers
- Holds the micro-lessons the video skips
- Searchable historical record
- Source material for ChatGPT stage 2

PDF

The toolkit

*Visual reference cards.
Printable. Pin-on-wall format.*

- The artefact that actually lives on the floor
- Distilled visual summary per principle
- Daily DO/DON'T cards by session
- Most-used asset by frontline reps

QUIZ

The check

*Seven multiple-choice questions
plus coaching notes.*

- Tests whether the content landed
- Flags reps who watched passively
- Surfaces lessons that aren't sticking
- Future: interview filter for new hires

+ SYNTHESIA VIDEO

Stage 2 output. ChatGPT distils the PDF and Word doc into a ~7-minute video script, rendered through Synthesia. Designed to keep reps watching — the most-engaged-with format for time-poor staff. Currently one video per session.

The gap — value still on the table.

14+ hours of recorded content. ~70 minutes of Synthesia output. The maths reveals the opportunity.

WHAT GOES IN

14+

HOURS OF RECORDED TRAINING

- Mindset coaching
- Sales tactics & scripts
- Leadership lessons
- System-level frameworks
- Live deal walk-throughs

WHAT COMES OUT

~70

MINUTES OF SYNTHESIA VIDEO

- One executive summary per session
- Top-level theme surfaced
- Micro-lessons stay in the transcript
- No cross-session topic grouping
- Mixed topics within each video

THE OPPORTUNITY

The current pipeline produces one summary per session. The next pipeline produces one lesson per subject heading — pulling content from across all sessions. Estimated output from the same 14+ hours: roughly 3–5 hours of focused short-form content, plus ~2 hours of structured questioning material. Same input. Six to seven times more usable output.

THE PRINCIPLE

Index the lessons, not the sessions. The session is the calendar; the lesson is the unit of value.

Marketing Sweet University.

Future state. Lessons grouped into chapters, organised by topic — not by the week they were taught.

THE BUILD STEPS

- 01 Index the back-catalogue.**
AI pass over all transcripts. Extracts every major subject heading across sessions.
- 02 Group into chapters.**
Subject headings cluster naturally. Each chapter holds 5–15 lessons.
- 03 Generate each lesson.**
1.5–3 minutes per lesson. Script chooses the duration the topic needs.
- 04 Build the quizzes.**
~2 hours of questioning across the curriculum. Tests cross-chapter comprehension.

Virtual Corie.

Teach the lesson once. Deliver it many times. Free the trainer to coach, not lecture.

CURRENT STATE

Corie is the head trainer. Same lessons get taught repeatedly. Staff churn means re-teaching to whoever joins next.

THE COST:

- Trainer time is the bottleneck.
- Delivery quality drifts with fatigue.
- Same explanation, twelfth time, lower energy.
- New hires wait for trainer availability.
- Lessons aren't captured systematically.

FUTURE STATE

Lessons taught once, captured, distilled, delivered by virtual Corie. Trainer coaches the application — never re-teaches the canon.

THE BENEFIT:

- Trainer time freed up for coaching.
- Identical delivery, every time.
- New hires watch on day one.
- Whole back-catalogue stays accessible.
- Other trainers' content folds in too.

THE ROLE SHIFT

Trainer stops being delivery. Trainer becomes coaching — reviewing how reps applied the lessons, where they got stuck, what the curriculum is missing. Higher-leverage work. Less repetition.

The paid course thesis.

Pre-condition the talent pool. The course is the funnel. The job is the prize.

WHY IT WORKS

The audience — marketing graduates and aspirants — has been conditioned for years that credentials are the path forward. They feel unmoored without academic resistance. A structured, paid course gives them what they expect (rigor, completion, a credential) and gives Marketing Sweet what it needs (a pre-screened, pre-conditioned talent pool that has already absorbed the canonical principles).

STRUCTURAL NOTES

- Sit it under a separate entity (hybrid or new brand). Course revenue lands there, not in the agency.
- Market as "affiliated with Marketing Sweet." Credibility flows from the agency's track record.
- Pricing can use the same pressure-release-incentive logic as a sales pitch.

Next steps + open questions.

What to build first. What to watch. Where the gaps still are.

BUILD NEXT · THIS QUARTER

01 Keep producing the 3-asset pack per session.

Workflow is proven. Don't disrupt the engine while building the next layer.

02 Make sure every trainer records.

Not just Corie. Anyone training anything captures audio + transcript going forward.

03 Consolidate the back-catalogue.

All transcripts in one ingestible location. Ready for indexing.

04 Prototype the cross-session indexer.

AI pass over the ~14 hours. See what subject groupings emerge naturally.

05 Build one chapter end-to-end.

Pick Mindset. Generate 5–10 short lessons under it. Review how they read together.

06 Pilot academic pressure at hire.

Test the thesis before committing to a paid product launch.

OPEN QUESTIONS

- Who builds the cross-session indexer? One-off prompt or recurring pipeline?
- Where does the back-catalogue actually live?
- Who else inside the business should be recording their training?
- Which entity does the standalone course sit under?
- Market the course to non-graduates too, or stay graduate-specific?
- How do we measure whether "academic pressure" is actually working?
- What's the right cadence for refreshing chapter content as new sessions land?
- How do we keep the in-house team's curriculum and the paid course's curriculum in sync?

THE ONE-LINER

Index the lessons. Build the chapters. Let the academic pressure pre-condition the talent pool.
